Solabrite

Distributed in USA by SSI-Global Corp

Natural Light, the Natural Way.

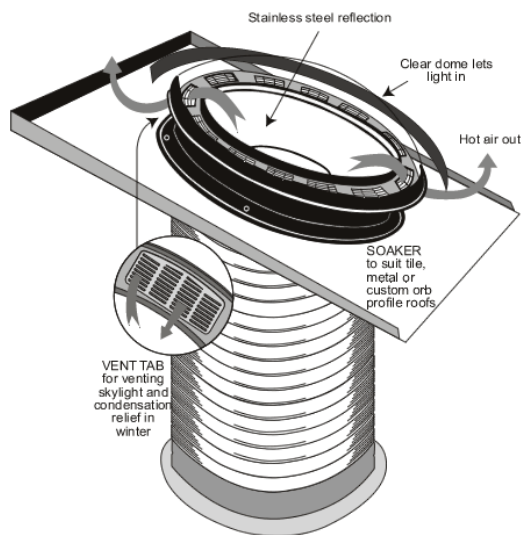

The SolaBrite is the perfect way to illuminate small, dimly lit rooms. Available in 16" diameter size. It allows natural light to enter through a roof mounted, high impact acrylic dome. Flexible foil tubing in conjunction with upper and lower reflector rings carries the light to a prismatic diffuser.

Features Of Solabrite

- 16" diameter natural skylight.
- Easy to install. One base fits all major roof types.
- Top and bottom highly reflective aluminium rings.
- Attractive ceiling ring and diffuser.
- High impact acrylic, low profile dome.
- 7' high grade reflective tubing.
- Suitable for installation by home handyperson.

'The tubular skylight that brings natural light & ventilation into your home.'

Installation Hints :

- The 16" units are ideal for areas such as walk-in-closets, kitchens and modest family rooms, lounge areas and extended passageways. To achieve an even spread of light in large rectangular rooms, 2 units are the preferred option.
- The units fit between roof rafters and can be fitted by a competent handyperson..
- The dome should preferably face due North to capture maximum light in winter.
- The flexible tubing works best when fixed in a straight line but can be offset to reach difficult areas. Any bending of the tube will reduce the proportion of reflected light.
